Radioactive Substances

Manufacturer Declaration of Conformity

Radionuclides (or radioactive substances) are a class of chemicals in which the atomic nucleus is unstable. They achieve their stability through changes in the nucleus (spontaneous fission, emission of alpha particles, or conversion of neutrons to protons or vice versa). This process is called radioactive decay or transformation and is often associated with the release of ionizing radiation (beta particles, neutrons, or gamma rays). This radioactive decay is very harmful to living organisms.

Traco Electronic AG (TRACO) hereby declares that all TRACO POWER products do not contain radioactive substances.

TRACO does not directly purchase any radioactive substances.

TRACO POWER products have been manufactured without the intentional use of radioactive substances.

TRACO has processes and procedures in place to ensure that our suppliers meet our expectations. We have communicated our requirements to our suppliers to ensure that radioactive substances are not used in our products. We have subsequently obtained declarations from our suppliers confirming their commitment and upstream due diligence.

TRACO is diligently working to ensure that our supply chain is and remains free of radioactive substances. Please contact us if you have any further questions about our program.

A handwritten signature in blue ink, appearing to read "S. Schaffhauser".
