Battery Controller Module
TSP-BCMU360 Series, 360 Watt

Features

◆ Universal battery controller module for uninterruptable 24 VDC and 48 VDC bus voltage
◆ Redundant inputs for two independent sources
◆ Battery protection for over voltage, deep discharge, short circuit and reverse connection
◆ Alarm outputs for input, output and battery condition
◆ Remote On/Off for battery
◆ Controlled end of charge voltage by temperature sensor
◆ International safety approval package
◆ 3-year product warranty

This module provides a professional battery management system to charge and monitor an external 12V lead-acid battery. Together with a power supply of the TSP series or any other stabilized 24 VDC or 48 VDC power supply a perfect DC-UPS system can be configured. The connected battery will be charged and held in charged mode by the power supply. In the event of a mains power failure the battery will supply the output power until the battery is discharged. A step up converter is used to maintain the selected output voltage level, Vnom - 6% (typical). To avoid overcharging the battery, an external temperature sensor adjusts the battery voltage automatically to the required end of charge voltage. This can extend the battery life. The battery is protected against deep discharge. Mains power and battery status are monitored regularly and failures indicated by corresponding LED's and alarm outputs. The module also provides an external On/Off input to switch-off both, power supply and battery.

* Maximum current at nominal Vout

Accessory:

TRACO POWER 12V battery pack: TSP-BAT12-072
Output Specifications

Output voltage / current
- Normal Mode 24 VDC mode: \( V_{in} = (0.4 - 0.8V); 15\text{ A max.} \)
  48 VDC mode: \( V_{in} = (0.4 - 0.7V); 7.5\text{ A max.} \)
- Buffer Mode 24 VDC mode: \( 22.2 - 22.9\text{ VDC}; 10\text{ A} \) in boost mode for 10min
  48 VDC mode: \( 44.6 - 45.3\text{ VDC}; 5\text{ A} \) in boost mode for 3min

Efficiency
- Normal Mode (load >50 % of Iout max.) 94 – 98 % (battery charged)
- Buffer Mode 87 – 92 %

General Specifications

Operating temperature
- Normal Mode 24 VDC mode: \(-25^\circ\text{C} \) to \(+70^\circ\text{C} \) max. [without derating]
  48 VDC mode: derating above \(+50^\circ\text{C} \) : 2.0 %/K
- Buffer Mode nominal 24 VDC mode: derating above \(+40^\circ\text{C} \) : 2.0 %/K
  48 VDC mode: up to \(+40^\circ\text{C} \) for 10 minutes max.
- Buffer Mode boost 24 VDC mode: up to \(+40^\circ\text{C} \) for 3 minutes max.

Storage temperature \(-25^\circ\text{C} \) to \(+85^\circ\text{C} \) max.

Temperature coefficient 0.02 %/K

Humidity (non condensing) 95 % rel. H max.

Reliability, calculated MTBF at \(+25^\circ\text{C} \) acc. to IEC 61709 > 1.5 Mio. h

Battery protection against over voltage, deep discharge, overcharge, short circuit and reverse connection (built-in fuse)

Signals
- Status DC OK input, DC OK output, BAT OK
  all relay contact closed and LED on at status OK
- Contact rating 30 VDC / 1.0 A max.
  60 VDC / 0.5 A max.

Battery charging current 0.8 – 1.2 A

Nominal battery voltage (at 25ºC) 13.6 VDC (factory setting)

Battery voltage adjustment range 13.2 – 14.4 VDC

Battery resistance test 100mOhm min. (normal mode at 25ºC)

Battery test current 2.5A / 60ms typ. (normal mode at 25ºC)

Battery test interval (acc. to jumper setting) 15s or 10min

Battery warning 10.4 – 11.4 VDC (buffer mode only)

Battery disconnection 9.1 – 9.7 VDC (buffer mode only)

Battery remote Off disconnects battery in buffer mode [see page 6 · connector]

Automatic battery temperature compensation range \(-15^\circ\text{C} \) – \(+50^\circ\text{C} \)

Degree of protection IP 20 (IEC/EN 60529)

Altitude during operation 2000 m

Safety standard IEC/EN 60950-1, UL 60950-1 (2nd) + Am1:2011
UL508 – requirements

Safety approvals – CSA
- CB test certificate
- Certification documents

Electromagnetic compatibility in correspondence to connected unit (no internal switching device)

Environment
- Vibration acc. IEC 60068-2-6
  3 axis, sine sweep, 10 – 55 Hz, 1 g, 1 oct/min
  3 axis, 15 g half sine, 11 ms
- Shock acc. IEC 60068-2-27

Enclosure material aluminium (chassis) / stainless steel (cover)

Mounting
- DIN-rail mounting
  for DIN-rails as per EN 50022:35×15/7.5
  (snap-on with self-locking spring)
- Wall mounting (option) with wall mounting bracket - see page 7

Connection
- Input Output battery screw terminal (plug included)
- Signal & control detatchable screw terminals (plugs included)

Installation instructions www.tracopower.com/overview/tsp-bcmu

All specifications valid at nominal input voltage, full load and \(+25^\circ\text{C} \) after warm-up time unless otherwise stated.
1. General Description

The TSP-BCMU360 module extends any 24VDC or 48VDC power supply to a DC-USV (uninterruptable DC Power supply). This module is a standalone unit and is designed to function with the Traco TSP series; however it can be used in conjunction with any fully stabilized 24V or 48V DC power supply output. The set voltage is configured through the means of a jumper on the unit with two selectable DC voltage levels, 24V or 48V. No other signals are required between the TSP-BCMU360 and the connected power supplies for correct operation of the module. In the event of power fail from the connected power supply, the energy required by the load will be supplied continuously and without interruption from an external 12V lead acid battery. The module also offers the unique feature of redundant inputs as well as the battery backup. Redundancy is achieved by two internal decoupling diodes which allow operation with two independent voltage sources in order to increase the reliability of the output even further.

2. Operation

2.1. Battery Backup for USV Operation

The TSP-BCMU360 module extends any 24VDC or 48VDC power supply to a DC-USV (uninterruptable DC Power supply), this is achieved by connecting a 12V lead-acid battery to the BATT_IN connector of the unit. During normal operation, the connected power supply provides energy to load with a voltage level of Vin -0.5V (typical, 0.5V loss due to internal decoupling diodes) as well as charging the connected battery. If the connected supply fails, the battery is then connected to the load (buffer mode), a step up converter is used to maintain the selected output voltage level, Vnom - 6% (typical).

2.2. Dual Inputs for Redundancy

The module provides two inputs to connect two power supplies to facilitate a redundant system. If one of the two connected sources fails then the second supply will provide energy to load maintaining the desired operation of the unit. The unit is designed to function with the TRACO POWER TSP series, but due to its standalone nature it can be used with any type of fully stabilized 24V or 48V power supply.

2.3. Output Voltage Level and Efficiency

The TSP-BCMU360 module functions with both 24VDC (15A) and 48VDC (7.5A) supplies. The desired voltage is selectable by means of a jumper located on the side of the unit. It also offers very high efficiencies with up to 96% and 98% efficiency in normal mode for 24V and 48V modes respectively. In the buffer mode efficiencies are as high as 92% and 89% for 24V and 48V modes respectively.

http://www.tracopower.com
3. Battery

When the input DC voltage is present, the TSP-BCMU360 unit will automatically charge the connected battery to a set end of battery charge voltage level, factory set for 25°C for lead-acid batteries, using a constant current charging method of 1A (typical). As the battery voltage approaches the end of battery charge voltage level, the current will decrease proportionally; this characteristic is shown in Figure 1. The user can adjust the set end of battery charge voltage level by means of the “Battery Voltage Adjust” potentiometer.

Note: For Cycle Use (repeated charging and discharging of battery), it is recommended to use a charge current of 0.4CA or smaller, therefore batteries with a capacity of 2.5Ah or less should not be used with this module.

The module also provides an input connector for a temperature compensation probe. If this probe is connected, the unit will automatically compensate the end of battery charge voltage level depending on the measured temperature. The connection of the temperature probe also negates the need to change the potentiometer to compensate for a new temperature. The battery end voltage compensation curve is shown in Figure 2. (Applicable to factory setting of 13.6V/25°C)

3.1 Battery Protection

The TSP-BCMU360 module protects the connected battery against short circuit and overload by the means of a built in 40A fuse. This fuse is a standard 40A blade type fuse, which is accessible from the front panel of the unit for ease of replacement should the fuse be damaged during operation. The module also prevents deep discharge of the battery by disconnecting the battery from the load once the voltage level of battery has dropped below a defined threshold. An early warning of this disconnection is given to the user by means of the BATT-OK signal (see chapter 6). The BATT-OK signal will switch off when the battery voltage is roughly 1V above the deep discharge threshold.

Figure 1 – Battery Charge Characteristics

Battery End of Charge Voltage with Temperature Sensor

Figure 2
4. Ambient temperature and power rating

The TSP-BCMU360 module operates at temperatures between –25ºC - 70ºC. In normal mode the module can deliver full power up to 60ºC. In Buffer mode, a current derating of 2%/ ºC is required for 24V applications above 50ºC. The boost current of 15A is available at ambient temperatures up to 40ºC for a duration of 10 minutes as shown in Figure 3. In Buffer mode, a current derating of 2%/ ºC is required for 48V applications above 40ºC. The boost current of 7.5A is available at ambient temperatures up to 40ºC for a duration of 3 minutes as shown in Figure 4 (minimum start-up temperature in buffer mode is –10ºC).
5. Battery Remote On/Off

The TSP-BCM360 module provides a Battery Remote on/off input (2 pins on signal connector); if this input is short circuited (switch closed in Figure 5) the battery will be disconnected from the unit by means of an internal relay. A voltage of 1V or less across the Battery Remote on/off terminals will disconnect the battery from the unit. If the Battery Remote On/Off signal is set to off (short between pins) this will not affect the output of the unit in normal mode, however the battery will be disconnected, hence it will not charge. If the unit enters buffer mode while the Battery Remote On/Off signal is off, the battery will remain disconnected, hence no energy will be supplied to the load.

![Simplified Battery Remote On/Off Circuitry](image)

An overview of the Battery Remote on/off input is given in the table below.

6. Signals

The TSP-BCM360 module provides three signals to the user as an indication of the status of the unit; these signals are made available as LED indicators and corresponding isolated relay contacts and are as follows.

**Note:** All Signal Relay contacts are rated for 30VDC/1A, 60VDC/0.5A

**DC-IN-OK:** The DC-IN-OK LED will illuminate and relay will close if at least one of the inputs is present and has a voltage within +20 / −3% tolerance.

**BATT-OK:** The BATT-OK LED will illuminate and relay will close if the battery is charged and has a low internal resistance. During battery discharge operation this signal monitors the output voltage and will switch off the LED and open the relay when the battery approaches the disconnection voltage.

**DC-OUT-OK:** The DC-OUT-OK LED will illuminate and relay will close if the output voltage of the unit is higher than 85–90% of the nominal output voltage.

All specifications valid at nominal input voltage, full load and +25°C after warm-up time unless otherwise stated.
Battery Controller Module
TSP-BCMU360 Series  360 Watt

Connector Position

Remote On/Off
Recommended switch specifications for operation with a switch:
5V / 5mA
For direct pulldown operation, the voltage level has to be <1.0V

Configuration Pins

Factory Settings

A: Battery test period 10 min (not fitted, default); 15 sec (fitted)
B: Output voltage settings 48 V (not fitted); 24 V (fitted, default)
C: Not in use (spare jumper fitted)

Outline Dimensions

Weight: 730 g
