Ozone Depleting Substances

Manufacturer Declaration of Conformity

Ozone-depleting substances are man-made gases that destroy the ozone once they reach the ozone layer. The ozone layer is located in the upper atmosphere and reduces the amount of harmful ultraviolet radiation that hits the earth from the sun. Ultraviolet radiation can have harmful effects on both humans and the environment. For example, it can cause skin cancer and cataracts, affect plant growth, and damage the marine environment.

Traco Electronic AG (TRACO) hereby declares that all TRACO POWER products do not contain Ozon depleting substances.

TRACO does not directly purchase any Ozon depleting substances.

TRACO POWER products have been manufactured without the intentional use of Ozon depleting substances.

TRACO has processes and procedures in place to ensure that our suppliers meet our expectations. We have communicated our requirements to our suppliers to ensure the non-use of Ozon depleting substances in our products. We have subsequently obtained declarations from our suppliers confirming their commitment and upstream due diligence.

TRACO is diligently working to ensure that our supply chain is and remains free of Ozon depleting substances. Please contact us if you have any further questions about our program.

A handwritten signature in blue ink, appearing to read "S. Schaffhauser".
